This journal is printed on acid-free paper.

Contents of Volume 136

Number 1, July 1992

The Enantioselective Hydrogenation of Methyl Acetoacetate over Supported Nickel Catalysts. I. The Modification Procedure
Mark A. Keane and Geoffrey Webb 1

Oxygen X-Ray Absorption Near-Edge Structure Characterization of the Ba-Doped Yttria Oxidative Coupling Catalyst
M. P. Kaminsky, G. W. Zajac, J. C. Campuzano, M. Faiz, L. Beaulaigue, K. Gofron, G. Jennings, J. M. Yao, and D. K. Saldin 16

Model Studies of Cesium Promoters in Water–Gas Shift Catalysts: Cs/Cu(110)
J. M. Campbell, Junji Nakamura, and Charles T. Campbell 24

Dispersion of Platinum in Pt/ZSM-5 Zeolites
Gabriel N. Folefoc and John Dwyer 43

Dispersion and Activity of Molybdena–Alumina Catalysts Prepared by Impregnation and Solid/Solid Wetting Methods
B. Mahipal Reddy, E. Padmanabha Reddy, and S. T. Srinivas 50

Methanol Synthesis from H_2, CO, and CO_2 over Cu/ZnO Catalysts
K. G. Chanchlani, R. R. Hudgins, and P. L. Silveston 59

Diffuse Reflectance FT–IR Study of the Deactivation and Reactivation of Potassium Carbonate-Supported Sodium Catalysts for Propene Dimerisation
Philip G. Harrison and David Goodyear 76

Catalytic Behavior and Surface Chemistry of Copper/ZnO/Al_2O_3 Catalysts for the Decomposition of 2-Propanol
Franco Pepe and Riccardo Polini 86

Study of Carbonaceous Deposits on Fischer–Tropsch Oxide-Supported Iron Catalysts
J. Galuszka, T. Sano, and J. A. Sawicki 96

Preparation and Characterization of Chlorine-Free Ruthenium Catalysts and the Promoter Effect in Ammonia Synthesis. 1. An Alumina-Supported Ruthenium Catalyst
Shuzo Murata and Ken-ichi Aika 110

Preparation and Characterization of Chlorine-Free Ruthenium Catalysts and the Promoter Effect in Ammonia Synthesis. 2. A Lanthanide Oxide-Promoted Ru/Al_2O_3 Catalyst
Shuzo Murata and Ken-ichi Aika 118

Preparation and Characterization of Chlorine-Free Ruthenium Catalysts and the Promoter Effect in Ammonia Synthesis. 3. A Magnesia-Supported Ruthenium Catalyst
Ken-ichi Aika, Tomiko Takano, and Shuzo Murata 126

Simulation of Dynamic Behaviors of Simple Aromatic Hydrocarbons inside the Pores of a Pentasil Zeolite
Yoshiaki Nakazaki, Narushi Goto, and Tomoyuki Inui 141

Catalytic Etching of Pt/Rh Gauzes
J. Michael Hess and Jonathan Phillips 149

Electronic Interaction between Supports and Ruthenium Catalysts for the Hydrogenation of Carbon Monoxide
Tatsumi Ishihara, Kazuaki Harada, Koichi Eguchi, and Hiromichi Arai 161

Reduction of Ni^{2+} Cations in Y Zeolites. II. Effect of the Environment
Brendan Coughlan and Mark A. Keane 170

CO Hydrogenation over $PdNi_x$ Alloys Encaged in NaY Zeolite
Jennifer S. Feeley, Alexander Yu. Stakheev, Fernando A. P. Cavalcanti, and Wolfgang M. H. Sachtler 182

Heterogeneous–Homogeneous Reactions Involving Free Radicals in Processes of Total Catalytic Oxidation
Z. R. Ismagilov, S. N. Pak, and V. K. Yermolaev 197

Synthesis of Methylamines Studied by *in Situ* Carbon-13 MAS NMR Spectroscopy
Horst Ernst and Harry Pfeifer 202

Surface Structure and Reactivity of CrO_3/SiO_2 Catalysts
Du Soung Kim, Jean-Michel Tatibouet, and Israel E. Wachs 209

Hydrogen Activation by Magnesia Catalysts
Yulin Gu and Alan Brenner 222

Effect of Alloying on CO Hydrogenation Activity over SiO_2-Supported Co–Ni Alloy Catalysts
Tatsumi Ishihara, Nobuhiko Horiuchi, Takanori Inoue, Koichi Eguchi, Yusaku Takita, and Hiromichi Arai 232

Notes

An Experimental Study of Cyclic Operation of a Benzene Hydrogenation Reactor
A. Sudhakar Rao, K. B. S. Prasad, and M. Bhagavantha Rao 242

A Silicon-29 Magic Angle Spinning NMR Study of a Phillips (Chromia/Silica) Catalyst
John A. Chudek, Geoffrey Hunter, Colin H. Rochester, and Terence F. S. Smith 246

Study of Raney Ruthenium Catalyst for Methanol Synthesis
Kaoru Takeishi and Ken-ichi Aika 252

Isotope Exchange of Coke Hydrogens for Deuterium of Various Organic Compounds: Studies of Coke Deposited on a HZSM-5 Zeolite in Acetone Conversion
J. Nováková and L. Kubelková 258

A Theory for Two-Component Diffusion in Zeolites
Peter H. Nelson and James Wei 263

Characterization of TiO_2–SiO_2 Modified with H_2SO_4 and Activity for Acid Catalysis
Jong Rack Sohn and Hyang Ja Jang 267

Infrared Spectra of Carbon Monoxide Adsorbed on SiO_2-Supported Lanthanide–Ni Bimetallic Catalysts and Their Catalytic Properties
Hayao Imamura, Hiromi Sugimoto, Yoshihisa Sakata, and Susumu Tsuchiya 271

Letters to the Editors

Comment on "NO–CO Reaction on Square and Hexagonal Surfaces: A Monte Carlo Simulation"
B. J. Brosilow and R. M. Ziff 275

Reply to Comment by B. J. Brosilow and R. M. Ziff
K. Yaldram and M. A. Khan 279

Book Review

***Studies in Surface Science and Catalysis 57: Spectroscopic Characterization of Heterogeneous Catalysts*, Part A, *Methods of Surface Analysis*, and Part B, *Chemisorption of Probe Molecules*. Edited by J. L. G. Fierro**
W. Nicholas Delgass 281

Number 2, August 1992

Single-File Diffusion and Reaction in Zeolites
Jörg Kärger, Michael Petzold, Harry Pfeifer, Stefan Ernst, and Jens Weitkamp 283

The Role of Boundary Layer Mass Transfer in Partial Oxidation Selectivity
D. A. Hickman and L. D. Schmidt 300

Monte Carlo Simulation of Catalytic Reactions with Widely Varying Time Scales
L. V. Lutsevich and O. A. Tkachenko 309

Embedded Atom Calculations of the Equilibrium Shape of Small Platinum Clusters
A. Sachdev, R. I. Masel, and J. B. Adams 320

Changes in Dispersion of Platinum Deposited on LaY and CeY during Heating at High Temperatures in Oxygen, Hydrogen, Carbon Dioxide, and Water Vapour
S. Pikus 334

Kinetics of the CO/NO Surface Reactions by the Direct Observation of the Adsorbed Species
Eric W. Scharpf and Jay B. Benziger 342

Studies of Molybdena–Alumina Catalysts. XVIII. Lanthanum-Modified Supports
J.-W. Cui, F. E. Massoth, and N-Y. Topsøe 361

Hydrophilic Recognition by Polymer-Supported Phase Transfer Catalysts and Its Effect on Reaction Activity and Selectivity
E. Ruckenstein and L. Hong 378

Acidity Studies of Fluid Catalytic Cracking Catalysts by Microcalorimetry and Infrared Spectroscopy
D. Chen, S. Sharma, N. Cardona-Martínez, J. A. Dumesic, V. A. Bell, G. D. Hodge, and R. J. Madon 392

A Study of the Palladium-Catalysed Carbonylation of *N*-Chloroamines
Clive Davies and Melvyn Kilner 403

The State of Nickel in Ni/SiO_2 and Ni/TiO_2-Calcined Catalysts
J. P. Espinós, A. R. González-Elipe, A. Caballero, J. García, and G. Munuera 415

Reactions of Propane on Modified Metal Oxides
Zhentao Feng, Lujia Liu, and Rayford G. Anthony 423

Molybdenum-oxo Species Deposited on Titania by Adsorption: Mechanism of the Adsorption and Characterization of the Calcined Samples
N. Spanos, H. K. Matralis, Ch. Kordulis, and A. Lycourghiotis 432

Study of the Mechanism of the Cracking of Small Alkane Molecules on HY Zeolites
Prasad V. Shertukde, George Marcelin, Gustave A. Sill, and W. Keith Hall .. 446

Monte Carlo Simulations of Diffusion in Zeolites and Comparison with the Generalized Maxwell–Stefan Theory
L. J. P. van den Broeke, S. A. Nijhuis, and R. Krishna 463

The MoO_3–Al_2O_3 Interaction: Influence of Phosphorus on MoO_3 Impregnation and Reactivity in Thiophene HDS
Jenny M. Lewis and Ronald A. Kydd 478

Selective Isopropylation of Naphthalene over Zeolites
Patrice Moreau, Annie Finiels, Patrick Geneste, and Jonis Solofo 487

Regulation of Reaction Intermediate by Reactant in the Water–Gas Shift Reaction on CeO_2, in Relation to Reactant-Promoted Mechanism
Takafumi Shido and Yasuhiro Iwasawa 493

Applications of a New CAVERN Design to the Study of Reactions on Catalysts Using *in Situ* Solid-State NMR
Eric J. Munson, David B. Ferguson, Ali A. Kheir, and James F. Haw 504

The Interaction of NO with Copper Ions in ZSM5: An EPR and IR Investigation
E. Giamello, D. Murphy, G. Magnacca, C. Morterra, Y. Shioya, T. Nomura, and M. Anpo 510

Molecular Orbital Calculation of the Soft–Hard Acidity of Zeolites and Its Catalytic Implications
A. Corma, G. Sastre, R. Viruela, and C. Zicovich-Wilson 521

Comparison of Pentan-3-one Formation with Propionaldehyde Formation during Ethylene Hydroformylation over Rh/Active Carbon Catalyst
Nobuo Takahashi, Terushige Takeyama, Takashi Yanagibashi, and Yoshio Takada 531

Surface Structures of Supported Molybdenum Oxide Catalysts under Ambient Conditions
Du Soung Kim, Koichi Segawa, Tomotsune Soeya, and Israel E. Wachs 539

Heterogeneous Photocatalytic Oxidation of Gas-Phase Organics for Air Purification: Acetone, 1-Butanol, Butyraldehyde, Formaldehyde, and *m*-Xylene Oxidation
José Peral and David F. Ollis 554

The Development of Strong Acidity in Hexafluorosilicate-Modified Y-Type Zeolites
Ferenc Lónyi and Jack H. Lunsford 566

The Direct Partial Oxidation of Methane to Liquid Hydrocarbons over HZSM-5 Zeolite Catalyst
S. Han, D. J. Martenak, R. E. Palermo, J. A. Pearson, and D. E. Walsh 578

***In-Situ* Electron Microscopy Studies of Surface Segregation in Bimetallic Catalyst Particles**
S. G. Oh, N. M. Rodriguez, and R. T. K. Baker 584

Notes

Determination of the Metallic Surface Area of Ir/γ-Al_2O_3 Catalysts by Selective Chemisorption
M. Cabrejas Manchado, J. M. Guil, and A. Ruiz Paniego 598

Promoting Effects of Metal Iodides in $Ni(isoq)_4Cl_2$-Catalyzed Carbonylation of Ethanol and *n*-Propanol
Ashutosh A. Kelkar, Rajmohan S. Ubale, and Raghunath V. Chaudhari 605

Mechanism of Methyl Formate Formation on Cu/ZnO Catalysts
Moon-Jo Chung, Dong-Ju Moon, Kun-You Park, and Son-Ki Ihm 609

***In Situ* Infrared Spectroscopic and Catalytic Studies on the Oxidation of Ethane over Supported Palladium Catalysts**
Sabine Trautmann, Manfred Baerns, and Aline Auroux 613

HCN Formation from CCl_2F_2 (CFC12) over Iron Group Metal Catalysts
Yusaku Takita, Takeshi Imamura, Yukako Mizuhara, and Tatsumi Ishihara..... 617

Improved Mechanical Stability of Supported Ru Catalysts: Preparation by the Sol-Gel Method
T. Lopez, L. Herrera, R. Gomez, W. Zou, K. Robinson, and R. D. Gonzalez..... 621

Letters to the Editors

Comments on "Reactor Dynamics in the Evaluation of Photocatalytic Oxidation Kinetics"
Edward J. Wolfrum and Craig S. Turchi..... 626

Reply to Comments on "Reactor Dynamics in the Evaluation of Photcatalytic Oxidation Kinetics"
Allen P. Davis and Oliver J. Hao 629

Multiatom Sites and the Turnover Frequency
Geoffrey C. Bond..... 631

Multiatom Sites and the Turnover Frequency: Reply to G. C. Bond
Carroll O. Bennett and Michel Che 633

Author Index for Volume 136..... 636

NOTICE

The Subject Index for Volume 136 will appear in the December 1992 issue as part of a cumulative index for the year 1992.

INFORMATION FOR AUTHORS

The *Journal of Catalysis* publishes articles dealing with original studies in heterogeneous and homogeneous catalysis as well as studies relating catalytic properties with chemical processes at surfaces, studies of chemistry of surfaces, and engineering studies related to catalysis. All articles will be published in English.

Submission of Manuscripts. Manuscripts should be sent by registered mail to either of the Editors:

Professor Gary L. Haller
Department of Chemical Engineering
P.O. Box 2159 Yale Station
Yale University
New Haven, Connecticut 06520

Professor Frank S. Stone
School of Chemistry
University of Bath
Bath BA2 7AY, England

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Journal of Catalysis* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Form of Manuscript. Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. Submit manuscript (in English) in triplicate, including the original typewritten copy, with copies of all figures and tables. Originals of micrographs should also be submitted in triplicate for purposes of manuscript reviewing. All material (including tables, reference lists, etc.) should be typed double-spaced on one side of 8.5 × 11-in. white bond paper (with 1-in. margins on all sides). Each page of the manuscript should be numbered. *Page 1* should contain the article title, authors' names (without degrees), affiliations, a running title (abbreviated form of title) not exceeding 45 letters and spaces, and the name and complete mailing address (and telephone and fax numbers, if possible) of the person to whom proof should be mailed. *Page 2* should contain a short abstract.

Authors should use descriptive headings in this order: Abstract, Introduction, Methods, Results, Discussion, Acknowledgments, and References.

In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

If the manuscript refers to recently submitted manuscripts or papers in press (with the *Journal of Catalysis* or other journals) then please supply three copies of them so that the reviewers can judge the new manuscript in its proper context.

Revised manuscripts should be returned with one copy marked to show where changes have been made.

Notes and *Letters to the Editor* may not exceed 8 double-spaced typewritten manuscript pages (including tables and figures). Accepted Notes will not receive publication priority over articles.

Letters to the Editor will be considered for priority publication under the following conditions: (a) Letters must be related to some statement made in a recently published article in this Journal; (b) in cases of conflicting views on any topic, no more than one Letter from each author will be accepted.

Units of weights, measures, etc., when used in conjunction with numerals should be abbreviated and unpunctuated (e.g., 10%, 50 ml, 3 g, 8 cm).

The SI (Systeme International) system of units will be accepted without editorial change. Authors using other units are encouraged to define them in terms of SI units once in each publication, e.g., in an article where pressures are quoted in Torr to write "1 Torr = 133.3 N m^{-2}." For information concerning SI units, see *Quantities, Units and Symbols for Physical Chemistry,* 4th ed., prepared by I. Mills and published by Blackwell Scientific, Oxford, 1988.

Footnotes should be avoided if possible; but if essential, they should be designated by superscript Arabic numerals (starting with title) in the text.

Tables should be numbered with Arabic numerals in order of mention in the text. They should be typed double-spaced on separate pages. Each table should have a short descriptive caption typed (double-spaced) above the table. Table footnotes (indicated by superscript, lowercase, italic letters) should be typed at the end of the table.

Figures should be numbered with Arabic numerals in order of mention in the text; each figure should have a descriptive legend. Legends should be typed double-spaced together on a separate page. All illustrations should be in finished form suitable for reproduction. They should be planned to fit the proportion of the printed page (5.5 × 8 in.; column width, 2-5/8 in.). No figures should exceed 8.5 × 11 in. (21 × 27.5 cm). Lettering on drawings should be of professional quality or generated by *high-resolution* computer graphics and should be large enough (10–12 points) to take a reduction of 50–60%. Drawings should be made with black India ink on tracing linen, smooth-surface white paper, or Bristol board. Alternatively, *high-quality* computer graphics may be acceptable. Graph paper if used should be ruled in blue. Grid lines that are to show in the final reproduction should be inked in black.

Copies of drawings are not acceptable unless they are high contrast glossy prints. All but the very simplest structures and structural formulas must be designed for direct reproduction. Illustrations in color can be accepted only if the authors defray the cost.

Electron micrographs. Please supply three photographic copies of these so that the reviewers can inspect the fine details they contain.

References to the literature should be cited in the text by italic Arabic numerals in parentheses, set on the text line, and listed numerically at the end of the paper. Abbreviations of journal titles should follow the style used in *Chemical Abstracts' Service Source Index*, 1985. Style and punctuation of references should be in accordance with the following examples:

1. Latef, A., Aissi, C. F., and Guelton, M., *J. Catal.* **119,** 368 (1989).
2. Louis, C., and Che, M., *in* "Reactivity of Solids" (P. Barret and L. C. Dufour, Eds.), Vol. B, p. 1057. Elsevier, Amsterdam, 1985.
3. Pines, H., "The Chemistry of Catalytic Hydrocarbon Conversions." Academic Press, New York, 1981.

Proofs. Proofs will be sent to the author, with a reprint order form. Authors will be charged for alterations in excess of 10% of the cost of composition.

Reprints. Fifty reprints without covers will be provided free of charge. Additional reprints may be purchased; an order form will be included with proofs.

Personal Computer Disks. Manuscripts may be submitted to the *Journal of Catalysis* on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Please supply the file as a straight ASCII file with generic codes specified by the publisher. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular and mathematical material will be typeset conventionally. Art must be prepared as camera-ready copy; see the section on Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing the disk for typesetting conversion and a list of generic codes, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, 1250 Sixth Avenue, San Diego, California 92101; telephone: (619) 699-6415; fax: (619) 699-6800).
